SUMMARY

Machine Learning Engineer and Python Developer with hands-on experience in building AI, Machine Learning, and Computer Vision applications. Skilled in data preprocessing, feature engineering, model training, model evaluation, and deployment using Flask. Developed intelligent systems including fraud detection, object detection, classification models, and AI assistants using TensorFlow, Scikit-learn, OpenCV, and Python. Passionate about solving real-world problems through Artificial Intelligence and continuously expanding technical expertise.

EDUCATION

Bachelor of Science in Artificial Intelligence <i>NFC Institute of Engineering and Fertilizer Research, Faisalabad</i>	2023 – Cont.
Intermediate (Pre-Engineering) <i>KIPS College, Faisalabad</i>	2021 – 2023
Matriculation (Science) <i>Allied School, Faisalabad</i>	2019 – 2021

SKILLS

Programming Languages

- Python
- SQL
- JavaScript
- HTML
- CSS

Machine Learning

- Machine Learning
- Deep Learning
- Supervised Learning
- Feature Engineering
- Model Training
- Model Evaluation
- Data Preprocessing

Artificial Intelligence

- Computer Vision
- Natural Language Processing
- Object Detection
- Image Classification
- Predictive Modeling

Tools & Platform

- Git
- GitHub
- Google Colab
- Kaggle
- VS Code
- Jupyter Notebook
- Supabase

Soft Skills

- Problem Solving
- Analytical Thinking
- Team Collaboration
- Communication
- Continuous Learning

Libraries & Frameworks

- Scikit-learn
- TensorFlow
- Keras
- Pandas
- NumPy
- OpenCV
- Flask
- Streamlit

CERTIFICATES

- Artificial Intelligence & Machine Learning with Python-Navttc

PROJECTS

Jarvis AI Desktop Assistant

Technologies: Python, Flask, Ollama, Speech Recognition

- Created an AI-powered desktop assistant capable of voice commands and task automation.
- Integrated application control, web search, file management, and conversational AI features.

Smart Waste Classification System

Technologies: TensorFlow, Flask, OpenCV, Python

- Built a deep learning application to classify waste into six categories with high prediction accuracy.
- Implemented image upload, live camera detection, and recycling recommendation features.

Credit Card Fraud Detection System

Technologies: Python, Scikit-learn, XGBoost, Flask, Pandas

- Developed a machine learning system to identify fraudulent credit card transactions using multiple classification algorithms.
- Improved fraud detection performance through data preprocessing and class imbalance handling techniques.

AI-Powered People Counting System

Technologies: YOLOv8, OpenCV, Flask, Python

- Developed a real-time people counting system using object detection and multi-object tracking.
- Generated occupancy analytics and crowd monitoring insights through a web dashboard.

Apple Disease Detection

Technologies: TensorFlow, Keras, Flask, Python, NumPy, Pillow

- Built a CNN-based deep learning application to detect apple diseases from images using TensorFlow and Flask, featuring a modern dashboard with prediction analytics and disease information.

ACHIEVEMENTS

- Developed 10+ Python, Machine Learning, and AI projects.
- Built real-time Computer Vision, Fraud Detection, and Automation systems.
- Worked with TensorFlow, Scikit-learn, OpenCV, Flask, and Python.
- Applied Machine Learning and Deep Learning techniques to solve real-world problems.
